

Tutorial 0: Welcome & Setup

Getting Started with Python & Wing101

Faiza

University of Toronto Scarborough

Week 1

Introduction

- Hi everyone, my name is Faiza
- 3rd year Data Science and Machine Learning Specialist at UTSC
- Excited to be your TA this term!
- There will typically be **two TAs** per tutorial each week, starting next week
- Lots of chances to ask questions and get help

How Tutorials Work

- Labs are posted on Quercus every week under Modules → Labs
- You're expected to complete them during tutorial time
- Format:
 - A PDF to follow along with
 - Starter code, run in your IDE
- Reminder: IDE = Integrated Development Environment
- We use **Wing101** (preferred) – VS Code is also popular, but Wing101 is what we recommend
- Show a TA your completed work → free to go, or stay and ask questions

Quizzes (Starting Week 4 / Lab 2)

- Quizzes begin in tutorial starting Week 4 / Lab 2 – done in tutorial, but on computers
- Better to bring your own computer, but lab computers work too
- Quizzes start at **exactly 10:10** (10 minutes after the hour)
- **Be on time** – no extra time given for latecomers

How to Succeed in This Course

- 1 **Do the readings** before lab so you're prepared to work
- 2 **Practice, practice, practice** – concepts click the more you work with them
- 3 **Ask questions** – especially in CS, questions help connect concepts

Don't be afraid to ask!

Today's Plan

- Install **Python3**
- Install **Wing101**
- Work through **Lab 0**

If you already have Python3 and Wing101, feel free to download Lab 0 now and get started.

Setup: Python3

- Download and install Python3
- Confirm installation before moving on to Wing101

Setup: Wing101

- Download and install Wing101
- This is the IDE we'll be using for tests, so it's worth getting comfortable with it now

Lab 0

- ➊ Go to Lab 0 and download the PDF – open and read the instructions
- ➋ Download the Python file (.py extension)
- ➌ Right-click → **Open in Wing**

Wing101 layout:

- Code editor – like editing a document
- Terminal – where your code runs
- Output area – for testing (covered later in the course)

- Any notes I've had from when I took CSCA08 will be posted on my website

Let's Get Started!

Questions? I'm here to help.

Get started on Lab 0, and make sure to show me your work before you leave!
